

Features:

- High output power
- High spectral stability
- Non-polarized light output
- Low power consumption
- Compact size

BaySpec's **IntelliGain®** Broadband ASE Light Sources are based on amplified spontaneous emission in erbium-doped fibers and are developed using our proprietary EDFA technology. These light sources provide superior optical output to the conventional LED sources over a broad spectral range (1525 - 1605 nm). Different power levels and multi-output options are available and suitable for a variety of different applications, providing cost effective solutions to the market.

Applications:

- Optical component spectral tests
- DWDM system and component tests
- Optical measurement systems
- Optical sensing
